Comply™ Premium Earphone Tips Satisfy the Spectrum of Consumer Preferences

Comply™ Earphone Tips designed for active, isolation, comfort and professional lifestyles

OAKDALE, Minn. (Jan. 7, 2013) – Recognizing that no single tip can address all consumers’ desires, [Hearing Components](#) is offering a full line of earphone tip styles designed to fit users’ lifestyles. Available online at www.complyfoam.com and at major retailers, Comply’s Premium Earphone Tips satisfy the spectrum of user preferences for sound and comfort.

“There are literally dozens of great earphone brands on the market, yet many consumers still look for ways to take the listening experience to the next level,” said Steve Thompson, director of sales and marketing for Hearing Components. “With four different series designed to conform to individual lifestyle preferences, Comply™ Foam Tips affordably enhance and personalize the overall listening experience — whether it’s active, isolation, comfort or professional level the user is seeking.”

The “ultimate earbud upgrade” for any consumer, Comply Premium Earphone Tips are the only universal replacement earbuds on the market with selection options to meet user preferences as well as a variety of price points. Available in four styles designed to fit specific user preferences, the Comply family of earphone tips provides consumers with options for enhancing their listening experience.

- **Active S-Series.** For users on the move, Comply Active S-Series tips deliver a custom stay-in-place fit, amazing all-day comfort and superior sound quality without outside noise distraction. Available in Charcoal, Blueberry and Schnozberry, these tips combine color with secure fit to enhance your style and listening experiences when on the move. These tips are priced at \$9.95 (plus S&H).

- **Isolation T-Series.** These tips are designed to deliver maximum noise isolation for a superior audio experience. Engineered with super soft memory foam that gently seals the ear canal, providing amazing comfort and a stay-in-ear fit, the Isolation T-Series tips empower users to hear music the way it was meant to be heard with all the highs, mids and lows funneled directly into the ear. These tips are priced at \$14.95 (plus S&H).

- **Comfort Ts-Series.** The latest addition to the Comply family of earphone tips, the Comfort Ts-Series delivers maximum comfort through a spherical shape. Ideal for those who want superior audio experience and stay-in-ear fit, the Ts-Series delivers on both through its super soft memory foam that gently seals the ear canal. These tips are priced at \$16.95 (plus S&H).

- **Professional P-Series.** Offering the highest level of noise isolation with excellent in-ear retention, the Comply P-Series tips are made with soft memory foam technology with a tapered shape for maximum comfort. The tips achieve maximum noise reduction by sealing the ear canal against environmental distractions so users can enjoy music without raising the volume.

The Active, Isolation and Comfort earphone tips are available in four models to fit all major earphone brands.

Additionally, both the Isolation and Comfort Series earphone tips are available in a version with Wax-Guard Technology, which helps retain sound quality and extend earphone performance. Through an acoustically transparent filter, the tips are protected from component corrosion and loss of sound quality caused by cerumen (earwax).

The key to the comfort and sound quality delivered by Comply's Premium Earphone Tips is its memory foam. The unique breathable memory foam provides all-day comfort, while eliminating in-ear irritation and fatigue often associated with stock silicone tips. Activated by body heat, these tips expand to fit the ear canal's unique shape, giving the user a custom fit and remarkable in-ear retention without irritation and fatigue.

About Hearing Components

Comply™ Premium Earphone Tips, Plugs, Noise Reduction Earphones and Whoomp!™ Earbud Enhancers are manufactured and sold by Hearing Components, a 3M spinoff founded in 1990 by Dr. Robert Oliveira. The patented technology was developed through several grants by the National Institutes of Health to improve and protect hearing. In addition to applications in law enforcement and public safety, the technology is currently used in military communications, industrial high-noise environments, consumer electronics, hearing aids and commercial aviation. Hearing Components is located in the Twin Cities suburb of Oakdale, Minnesota. For more information, visit www.complyfoam.com
